Final-year Computer Science student at Universitas Padjadjaran (GPA: 3.79/4.00) with hands-on experience in computer networking, cybersecurity, and back-end development. Combines deep network infrastructure expertise (CCNA-certified) with back-end architecture knowledge to analyze system vulnerabilities and detect threats from the inside out. Currently developing an automated Python-based cybersecurity library, backed by industry internship experience in building scalable server-side applications.

Education

Universitas Padjadjaran – Sumedang, Indonesia

Aug 2023 – present

Bachelor of Computer Science, GPA 3.79/4.00

Experience

PIPP, Universitas Padjadjaran – Sumedang, Indonesia

Mar 2026 – Present

Backend Developer Intern

- Architected and implemented scalable backend services using Next.js and Prisma ORM with a PostgreSQL database, designing efficient relational schemas to manage user data, system history, and administrative dashboard statistics.
- Integrated secure authentication and authorization flows by implementing Better Auth and robust session management, coupled with Nodemailer for automated email notifications and reliable user verification processes.
- Developed robust RESTful APIs and secure Server Actions for seamless data integration, specifically handling critical EEG data endpoints to ensure optimized performance and reliable data retrieval between the frontend and core backend systems

PT VINIX SEVEN AURUM – Remote Internship

Aug 2025 - Dec 2025

Junior Cybersecurity Engineer Division Intern and Trainee

- Managed Wazuh SIEM to monitor security events, detect network anomalies, and perform digital forensics to accelerate incident response.
- Executed vulnerability scans (Nessus, OpenVAS) and ethical hacking simulations, successfully mitigating critical flaws like SQL Injection to harden web servers.
- Secured virtual environments (OpenStack, Proxmox) and engineered a custom PKI (OpenSSL), ensuring encrypted communications and reliable disaster recovery via UrBackup.

Projects

Vulnlabjs : OWASP top 10 Common Vulnerability Lab

May 2026 – Present

- Developed an interactive web security learning platform focused on the OWASP Top 10, providing hands-on simulations of critical vulnerabilities including SQL Injection, XSS, IDOR, and Broken Access Control.
- Engineered intentionally vulnerable server-side APIs and their secure counterparts using Next.js 16, Prisma ORM, and PostgreSQL to demonstrate exploit mechanics, root causes, and remediation strategies.
- Authored comprehensive vulnerability analyses and technical writeups for each module, detailing exploitation techniques, business risk impacts, and secure coding practices to educate on threat mitigation.

Pyfend : Python Based Cybersecurity CLI Tools

April 2026 – Present

- Developed PyFend, a custom Python-based cybersecurity toolkit designed to automate CLI workflows, significantly streamlining security operations, incident response, and threat analysis.
- Engineered cryptographic analysis modules such as HashProbe to facilitate efficient password auditing, digital forensics, and robust data integrity verification.
- Implemented secure scripting and robust dependency management to build reliable, modular security utilities capable of seamless integration into broader defensive architectures.

NutriScale : Nutrition Management Website

Feb 2026 – Jun 2026

- Engineered a secure backend authentication architecture using Next.js and Better-Auth, implementing robust session management and Role-Based Access Control (RBAC) to secure administrative and user-specific API endpoints.
- Developed and secured core e-commerce API endpoints integrated with Midtrans, implementing secure webhook handlers with cryptographic signature verification to guarantee transaction data integrity and authenticity.
- Designed secure relational database schemas (PostgreSQL, Prisma) to manage sensitive health and transaction data, enforcing strict data validation to inherently mitigate SQL Injection vulnerabilities across all backend operations.

Certifications

Cisco Networking Academy

- CCNA: Enterprise Networking, Security, and Automation (Jul 2026)
- CCNA: Switching, Routing, and Wireless Essentials (Jun 2026)
- CCNA: Introduction to Networks (May 2026)

PT VINIX SEVEN AURUM (MSIB)

- Certified Independent Study: Junior Cybersecurity Engineer (Dec 2025)

Technical Skills

- **Cybersecurity & Networking:** Wazuh SIEM, Nessus, OpenVAS, PKI (OpenSSL), OWASP Top 10, Cryptography (Signature Verification), Network Security.
- **Backend Development:** Python, TypeScript, Next.js, PostgreSQL, Prisma ORM, RESTful API Security, Role-Based Access Control (RBAC).
- **Tools & Others:** CLI Automation, Dependency Management (uv), Git, Kali Linux.
